

RECIPE · THE PART YOU TAKE HOME

Draft an RFI with AI.

You watched this in the session. Here is the same move, written down, so you can run it on your own project any week, on your own.

WHAT YOU NEED

- 1 The documents.** The spec section, drawing note, or detail the question is about.
- 2 The issue.** A plain-words description of the conflict or the question.
- 3 Your format.** Your standard RFI fields, or use the ones in the prompt.

THEN CHECK, BEFORE IT COUNTS

- ☐ The cited spec and drawing references are right
- ☐ It asks one clear question
- ☐ The suggested resolution is reasonable
- ☐ Nothing is invented or assumed without a flag
- ☐ Cost and schedule impact is noted. You edit. You send.

THE PROMPT · FILL THE BRACKETS, PASTE, GO

You're helping me draft a professional RFI for [project name].

The issue: [describe the conflict or question in plain words]

Relevant documents: [paste the spec section and / or the drawing note]

Our RFI format: number, date, to, from, subject, question, suggested resolution, cost / schedule impact

Draft the RFI in our format. Cite the documents, ask one clear question, and propose a suggested resolution. Flag any assumption you had to make. Keep it concise and professional.

TIP: KEEP THIS PROMPT IN A NOTE ON YOUR PHONE OR DESKTOP. NEXT TIME, YOU ONLY CHANGE THE BRACKETS.

KEEP IT SAFE

Use a tool that keeps your data private. If your company runs Microsoft 365, Copilot works inside your own environment, so nothing leaves the building. Otherwise use a business or enterprise AI assistant that does not train on what you paste in.

Mind what goes in. Project documents you own are fine. Never paste anything you would not email outside the company, and keep a person reviewing and sending every RFI.
