

THE WHOLE METHOD, ONE PAGE

Start with one pilot. Learn fast.

You have heard for a while now that AI can help your business. The missing piece has always been the how. So today we keep it small: pick one real task, watch AI actually do it, and leave able to run it again yourself. A **safe-to-fail pilot** is one bounded task you can learn from in weeks, not quarters. The point is not to be right the first time. It is to learn fast and keep what works.

Phase 1 DECIDE WHAT TO RUN

01 DEFINE

Write it as a pilot: one task, a hard boundary, the one outcome you want. If you cannot bound it, it is not ready.

02 REFINE

Pressure-test it with the room. Attack the idea, not the person, and it comes back stronger.

03 RANK

Score the value against the time it takes. The number points you to the first one to run.

THE SCORE · VALUE (100 TO 500) ÷ TIME TO VALUE (WEEKS) · HIGHER MEANS SOONER

Phase 2 THEN DO IT

04 CREATE

Draft it live in an AI tool, working from documents you already own.

05 TEST

Check the draft against the source: right references, one clear question, nothing invented.

06 HUMAN IN THE LOOP

You review, edit, and approve. The AI drafts; you decide and sign. Augment, not automate.

07 DEPLOY

Run the recipe again next week on a real job, then bring what you learn back to your group.

Safe means small, time-boxed, your own data going in, and a person checking before anything counts.

START HERE

Frame one pilot.

Pick a task your team does often, the repetitive, text-heavy kind. Keep it small enough to learn from quickly. This is the one you take home.

PILOT NAME

THE TASK (WHAT IT DOES)

BOUNDARY (WHERE IT STOPS)

INTENT (THE ONE OUTCOME YOU WANT)

IS IT SAFE? · ALL FOUR, YES

☐ Happens weekly or more
 ☐ A miss would teach us, not hurt us
 ☐ We already own the data going in
 ☐ A person checks output before it counts

WHERE TO LOOK

VALUE / IMPACT (CIRCLE ONE)

HIGH

MED

LOW

TIME TO VALUE (WEEKS)

DECISION DATE (START + 30 DAYS)

THEN RUN IT

THE TOOL I'LL USE

WHO REVIEWS IT BEFORE IT'S SENT

One pilot is one rep. The goal is not this task. It is the muscle to run the next ten, on your own.
