

FACILITATION GUIDE

How to run it.

The room has heard for two years that AI can help them. What they want is to see it actually happen, and to know they can do it again on Monday. This session gives them both: they decide on one small pilot, watch it run live, and leave with the recipe. Built for 60 minutes. There is a 90-minute version where they run one themselves.

You do not need to be an AI expert to run this. The demo does the technical part. Your job is to keep time, read the cards, walk through the live tool, and ask the questions on these pages. The group brings the industry knowledge. Stay warm, keep it moving, and let the room do the thinking.

TIME	MIN	STEP	WHAT YOU ARE DOING
PHASE 1 DECIDE WHAT TO RUN · THE THINKING			
0:00	5	Open	Name the feeling in the room, set the whole arc: pick one, watch it run, do it yourself.
0:05	7	Define	What a safe-to-fail pilot is. Frame the RFI case together.
0:12	8	Refine	Pressure-test the case, on a project nobody owns, so it stays honest.
0:20	5	Rank	Score value ÷ weeks. Make the flashlight-not-verdict point.
PHASE 2 THEN DO IT · THE DOING			
0:25	15	Create · Test · Human in the loop	The live demo on the sample project. The heart of the session.
0:40	12	Their turn	Each frames one pilot and sketches how they would run it.
0:52	5	Share	A few read theirs aloud. Quick, warm refine.
0:57	3	Deploy · close	The recipe is theirs. Run it next week, bring it back to the group.

0:00-0:05 OPEN, AND NAME THE FEELING

Most of the room believes AI could help them and has no idea where to actually start. Their quiet thought is, "everyone tells me AI can do this, I'm open to it, so how do I make it happen, and do it again next week without help?" Say that out loud. It lands as relief, not pressure.

"Quick gut check. Who here believes AI could help your business but isn't sure how to actually begin? Good, that's all of us. We are not going to talk about AI today. We are going to do one small piece of real work with it, together, and you'll leave able to do it again on your own."

0:05-0:20 DEFINE, REFINE, RANK (THE DECIDING)

Define. Plain words only. A pilot is one task, bounded, with a person in charge and a decision date. Frame the RFI case from the cards. **Refine.** Open it up and let the room pick it apart. Keep it on the idea, never the person, which is easy because the case belongs to nobody. **Rank.** Score it, value over weeks, and make the point that a fast, useful win beats a slow, bigger one. The number points; they decide.

0:25-0:40 THE LIVE DEMO (THE MOMENT THEY CAME FOR)

This is the answer to "show me." Open the demo on the sample project and walk the three steps on screen, slowly enough that they follow.

Create. Pick the issue. Let them watch the prompt assemble in the middle panel, then the draft appear. Point at the prompt: "this is the recipe, and you are getting it." **Test.** Read the draft against the documents together. Does it cite the right spec? Ask one clear question? **Human in the loop.** Edit a line, walk the review checklist, accept it. The person signs, not the machine.

Keep the human in the loop, out loud

Call it a draft, every time. The screen says "draft for your review." Say it too. The AI proposes; a person decides.

Show a catch. Find one thing in the draft to question or improve. A visible correction is worth more than a perfect output, because it proves they stay in control.

Augment, not automate. Land the line plainly: this gives your people their time back, it does not replace their judgment. Nothing gets sent without a person.

Name the data point. If they are a Microsoft shop, Copilot runs this inside their own systems, so their project documents never leave. That is the answer to the question they are afraid to ask.

0:40-0:57 THEIR TURN, SHARE, AND DEPLOY

Hand out the worksheet. Each leader frames one pilot from their own world and notes how they would run it: which documents, which tool, who reviews it. Circulate, one gentle question each. Then invite two or three to read theirs aloud, and keep the feedback warm.

Close on Deploy. The recipe card is theirs to keep.

"Start small. Learn fast. Run it again next week on a real job, then bring what you find back to this group. One person's pilot is a useful rep. Shared across the room, it's how a whole industry gets ahead together. That's the table you're already at."

No pitch at the end. If the work was useful, that speaks for itself.

ADD 30 MINUTES · THE 90-MINUTE VERSION

In 60 minutes they watch it done and leave with the recipe. In 90 they do one themselves before they leave, which is the difference between interest and adoption. Two inserts, right after the demo:

Run your own, live (25 min). Members open the demo, or their own Copilot, on the sample project and run a pilot themselves, with you and a helper circulating. Watching becomes doing.

A second issue (5 min). Run the coordination clash from the cards to show the same move handles a harder problem.

If you want the 90, it needs a little setup: laptops or phones, decent wifi, the demo link ready, and ideally a second person in the room to help.

If the room goes quiet: use the worked case as the model before anyone tries their own, or invite the most skeptical person to pick the RFI draft apart first. Skeptics make the best questioners, and the rest of the room follows them.

A NOTE ON THIS GUIDE

This kit is yours to use freely, with no strings. Anyone here can run the session. If your group would like help tailoring the cases to its specialty, or someone to lead the first run, just ask.
